AI Management System (AIMS) Policy

Be Data Solutions Limited is committed to using Artificial Intelligence (AI) in a responsible, secure, and transparent manner that supports our business objectives while maintaining the trust of our clients, users, and partners. As an organization delivering data-driven solutions and technology services, we recognize that AI has the potential to influence outcomes, shape decisions, and impact user experience. For that reason, we approach the use of AI with care, accountability, and a clear sense of responsibility.

Within our organization, AI is used primarily to enhance services such as analytics, automation, recommendations, and content generation. These capabilities are designed to support human decision-making rather than replace it. We ensure that appropriate human oversight is maintained, particularly in situations where AI outputs may influence important outcomes. We acknowledge that AI systems may not always produce perfect or complete results, and therefore we promote a culture where outputs are reviewed, validated, and used with informed judgment.

We are committed to ensuring that our use of AI aligns with all applicable legal, regulatory, and contractual requirements. This includes adherence to data protection and privacy obligations, particularly in jurisdictions such as the United Kingdom and the European Union where we operate. We take appropriate measures to safeguard personal and client data and to prevent its misuse in AI systems. Where third-party AI technologies are used, we ensure they are integrated in a controlled and responsible manner, with due consideration given to their limitations and risks.

Our approach to AI is guided by principles of fairness, transparency, and accountability. We strive to minimize unintended bias in AI outputs and to ensure that users are aware when AI contributes to results or recommendations. We are mindful of the risks associated with AI, including incorrect outputs, misuse of generated content, and dependency on external providers, and we actively work to manage these risks through our governance framework.

This policy provides the foundation for setting AI-related objectives across the organization. Through our Artificial Intelligence Management System (AIMS), we define measurable goals, monitor performance, and implement controls to ensure that AI is used effectively and responsibly. We also ensure that this policy aligns with and is supported by our broader organizational policies, including information security, data protection, and acceptable use practices.

Be Data Solutions Limited is committed to the continual improvement of its AI practices and management system. As AI technologies and regulatory expectations evolve, we will regularly review and enhance our approach to ensure it remains effective, relevant, and aligned with stakeholder expectations.

This policy is communicated within the organization and made available to relevant interested parties, including clients and partners, to provide transparency into how we manage and govern AI.

A handwritten signature in black ink, appearing to be "S. D.", is positioned above a horizontal line.
